

WALES OIL STORAGE REGULATIONS

Harlequin[®]
StorageTanks

RELIABLE CONTAINERS

Visit us online:
www.harlequin-mfg.com

DEADLINE: 15th MARCH 2020

WHY NEW REGULATIONS HAVE BEEN INTRODUCED?

Every year within Wales, there are between 130 – 300 reported water pollution incidents caused by oil. These incidents are mainly due to inadequate storage or poor management.

Due to this level of pollution, new oil storage regulations and guidelines have come into force in Wales from 2016. New regulations from Natural Resources Wales will mean all businesses in Wales with an oil tank are required to replace single skin storage tank to a bunded storage tank. The regulations apply to:

“All commercial premises in Wales which store more than 200 litres of oil, to provide more secure containment facilities for above ground oil storage inside or outside the premises. This is to prevent oil escaping into the environment.”

The minimum standards for new and existing oil storage containers state,

“A container with a secondary containment system (bund) must be provided to catch any oil leaking from the container or its related pipework or equipment, and must have sufficient capacity to contain at least 110% of the maximum contents of the oil container.”

Visit our website for more information on the new Wales Oil Storage Regulations:
www.harlequin-mfg.com

APPLIES TO THE STORAGE OF:

 Kerosene (Heating Oil)

 Waste Oil

 Diesel
